

The Office of Faculty Development Presents

Spring Semester 2011

A series of workshops dedicated to promoting an exchange of ideas about teaching and learning.

Geographic Information Systems in a Liberal Arts Education

Friday, April 1, 2011

3:00 - 4:30 p.m.

Todd Wehr Hall Room 206

We would like to invite you to a session highlighting the myriad of teaching and learning applications of Geographic Information Systems (GIS). GIS integrates hardware, software, and data to capture, manage, analyze, and display all forms of spatially referenced information. Just add creativity! GIS has revolutionized the ways in which we can question, interpret, and visualize data across a wide range of disciplines. GIS software has recently been installed in a College computer lab, and a first course is being offered this semester. Krissy Lukens, Instructional Technology Specialist, along with Dan Tilly, Adjunct Instructor of Geography and Lead GIS Specialist with Foth Infrastructure & Environment, will share examples of how GIS can be used to reveal relationships and patterns. Participants will have the opportunity to explore custom map applications using iPads that will be provided. Join us to view your world in a whole new perspective.
