

Caring for your LCD screen

LCD screens are not made of glass and require special attention.

To clean your LCD screen:

1. Turn off the monitor and the computer.
2. Dust by wiping the screen gently with a soft, clean cotton cloth.
3. If the screen requires additional cleaning, use a clean cloth dampened with isopropyl (rubbing) alcohol.

Caution!

- ◆ Do not use paper towels, as they can scratch the LCD screen.
- ◆ Do not use water or glass cleaner to clean the LCD screen.
- ◆ Never spray any liquid directly onto the LCD screen.
- ◆ Do not use benzene, thinner, ammonia, or any volatile substance to clean the monitor screen or cabinet. These chemicals may damage the monitor.
