Half Tablet

As prescription medication costs continue to increase, you may be searching for ways to lower your costs at the pharmacy. You can save up to 50% on your prescription costs by participating in Half Tablet.

You Get the Same Medication and Strength for Half the Cost

With Half Tablet, you take the same medication at the same strength, yet save money on medications you take on a regular basis — up to hundreds of dollars every year.¹

Here's How it Works:²

1. Your doctor writes a new prescription for twice the strength and half the quantity, noting your intent to split the tablets on your prescription.

2. A new prescription is filled and you automatically pay half your usual cost.

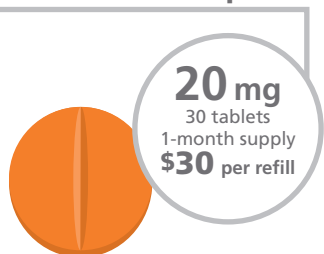

3. Split each tablet and take half — you get your usual dose for half the cost.

Savings example

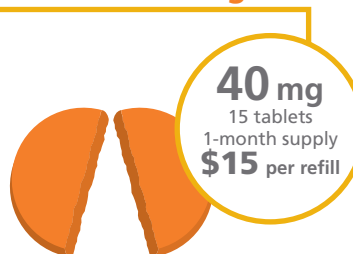

The following example shows how participating in Half Tablet can reduce your cost by half, taking the same tablet at the same strength.

Prescribed: 20 mg of Crestor per day, 30 tablets, 1-month supply.

Your Current Prescription

Half Tablet Program

Split each 40 mg tablet
into two 20 mg doses.

In this example, you would save \$15.00 per month, or \$180 annually.

Your actual savings will vary based on your medication costs and plan design.
